Scrum master first created a repo and invited all the group members then created folder in git bash in it then adding files and using different commands like:

1. git add – to add changes made file

2. git commit -m "adding changes" – to write message what changes are made.

3. git merge branch name/main – merges the branch with main

4. git push origin main – to push changes we made and added to GitHub

5. git stash – hides files temporarily

6. git stash list – shows hidden file

7. git stash pop – unhide files Then added our pdf file to the folder of our own where we have completed the task.

The screenshots of the commands that were used is below: -
